

PROJECT NAME: Air Permitting Support for Chemical Coating Company

PROJECT DESCRIPTION:

The client corporation had been notified to file a Title V Operation Permit by the Colorado Department of Health (CDH). The client business is to apply liners to pipe and storage vessels, and in doing so they generated both criteria and hazardous air emissions. EIS assisted the client with communication with CDH to apply for a Synthetic Minor Source Operating Permit, which based on their potential to emit was appropriate for their manufacturing processes. EIS provided the client with technical support during the permitting process based on an audit of emission sources. The audit identified those emissions which required permitting versus those emission sources that were either exempt or below de minimus regulatory limits.
