

PROJECT NAME: Site-Specific Training Course Manual

PROJECT DESCRIPTION:

A Colorado company contracted EIS to produce a site-specific three-day training course for its hazardous waste management facility (HWMF) personnel according to 29 CFR 1910.120 and State of Colorado regulation 6-CCR 1007-2 section 264.XX.

EIS examined the clients HWMF permit and processes and developed a course manual that reviewed OSHA requirements and good working practices. The manual covered safety for standard and non-routine tasks, including use of PPE, handling of drums, use of forklifts, waste handling, incoming and outgoing shipments, monitoring, operation of equipment, spill response, implementation of contingency plan, emergency equipment, and handling medical emergencies.
